

Go to developer/packages and press install local package.

Drag and drop the SiteAttention zip file or choose it by clicking the “Or click here to choose package file”

Navigate to the folder that contains the file and select it.

Click the “Open” button

The package will now be uploaded to the server.

Once uploaded, you will have to accept the license and press the “Install package” button

SiteAttention

Author [SiteAttention](#)

Package version 1.0.0

License [The MIT License \(MIT\)](#)

Package readme

SiteAttention gives you real-time tips on how to optimize your content so your pages are more Search Engine Optimized and rank higher on Google. In the settings section you can configure how SiteAttention should interact with different properties of your site in Edit mode. For meta tags, you need to add property in your content pages with id `metaDescription` for better results. For the full description of the project, visit [SiteAttention's website](#):

Forms

For each field that you can see it is possible to select a type of mapping:

Color Theme (colorTheme)	Not mapped ▼	
Contact Form Header (contactFormHeader)	Content tag ▼	3
Contact Intro (contactIntro)	Content tag ▼	2
Content (bodyText)	Content tag ▼	1
Default Currency (defaultCurrency)	Not mapped ▼	▼
Department (department)	Not mapped ▼	4

The options are:

Not mapped: The field is not a part of the page content

Content tag: The field is a part of the content on the page

Meta description: Content is in the meta description of the page

Page title: Field contains the page title

The Sort order field is only used in the content tag. It determines the sequence of the fields.

It is quite important to get this as precise as possible, because this gives you better results.

When you select a document type in the tree to the left, you will see the precise document type mapping.

If a value has already been set on the general mapping then you can select a new mapping specific for the document type.

You can also define a different sorting order.

Once you have changed the field on a document type, any changes to the fields in the overview will not be reflected in the document type.
